

MAINTENANCE MUSTS: RYSTIX

You've just received a piece of a beautiful story – a story that is quite literally rooted in the earth. To ensure your new furniture piece ages as it should, there are a few things you will need to do with your selected wood coating: RYSTIX. This is suitable for indoor use only.

1. MAINTENANCE SHORT TERM

Clean surface with a clean dry cloth for dusting or a damp cloth with well-diluted, soapy water (do not use any ammonia or caustic soda-based cleaning products) for spills etc. If coating seems to be getting dull, an application of any wax based furniture polish like Mr Min is recommended.

2. MAINTENANCE LONG TERM

Rystix is a technically advanced water-based hard-wearing coating for internal use. The product provides long lasting protection against scratching, staining and hot object marking, and is also highly resistant to marking against water and alcohol spills. This means long term maintenance should just entail keeping the surfaces clean – polishing as per point 1 in short term maintenance. If however damage to the surface does occur, please contact your nearest Homewood branch who can then assess and guide you on further steps to take.

3. APPLICATION PROCESS

Seek advice from the Homewood technical team or have Homewood apply the Rystix.

4. FURNITURE CLEANING

Wipe down with warm soapy water or a damp cloth. Make sure to not use ammonia or caustic products. Furniture wax based Polish products like Mr Min can be used to buff the surface up again.
